Workshop on Vendor Oversight

Since 2008, the Quality Assurance and Vendor Inspection Branch (IQVB) in the Division of Reactor Oversight (DRO), Office of Nuclear Reactor Regulation (NRR), have facilitated biennial public workshops related to vendor oversight.

These public workshops bring together licensees, applicants, suppliers of basic components, industry organizations, and other stakeholders to discuss vendor oversight issues.

The workshops provide an open forum for exchanging information regarding oversight of the supply of components, and materials to both new and operating nuclear power plants.

Since the NRC performs a limited number of vendor inspections each year, the vendor workshop also allows the NRC to provide regulatory perspective to the industry on specific topics related to issues identified by the staff during routine vendor inspections.

2024 Workshop Topics

Keynote Address

Aida Rivera-Varona

Deputy Director, Division Operating Reactor Licensing

Back to Basics – App. B, CGD, and Bringing into App. B

Marc Tannenbaum

Principle Technical Executive, Electric Power Research Institute

Panel Discussions

NRC Safety Culture & Safety Conscious Work Environment

Guidelines for Vendors

Navigating Part 21

ASME – Oversight & Conformity Assessment

Summary & Ask the NRC
